

AHU *type*

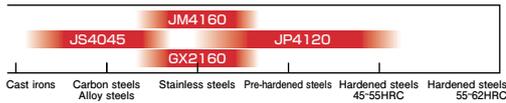

High Feed end mill AHU

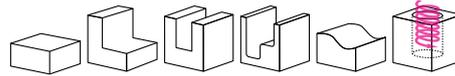

MOLDINO Tool Engineering, Ltd.

New Product News | No.1210E-10 | 2022-11

Technology

Applications

Features and Applications

- AHU has the outstanding sharpness and toughness.
- Evolved into the multi-function tool in which a ramping operation is possible.
- Enlarging the range of applications. Especially, AHU is suitable for turbine-blade machining.

It is lineup about two series by cutting edge length.

AHU(L)10 type Multi-flute type for low depth of cut.

AHU(L)15 type High rigidity type for high depth of cut.

Cutting force is reduced by high rake geometry.

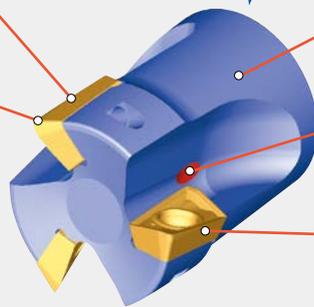

Ramping operation is possible.

Cutting Dia.
=Shank dia. +1mm type is standardized.

30% increased rigidity compared with conventional by using special steel and chip pocket geometry.

Coolant through is available.

Increasing tool life and suitable for high speed cutting by new substrate and coating.

Repatory

AHUL1021R-3
AHUL1026R-3

Recommended grades map

Insert cross-section	Low cutting force edge shape → Tough cutting edge shape

Titanium alloys	—	JP4120	—	PTH30E	—
Nickel-based alloys	—	(JM4160) (ST treatment)	JP4120 (AG treatment)	—	—

New inserts are added for difficult-to-cut materials. Newly appear two kind of breakers

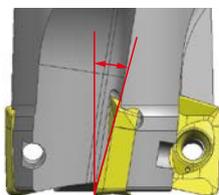

B5/B7 type breaker High-rake low-cutting force breaker

For cutting of stainless steel materials, machining of titanium alloys, and cutting of nickel-based alloys.

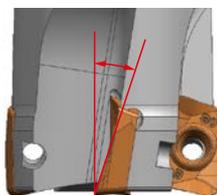

Features 1

- Achieved low cutting force by larger axial rake angle

Conventional Insert : 15 degrees

New breaker B/C type: 18 degrees

C5/C7 type breaker Mildly-raked low-cutting-force breaker

For machining of stainless steel materials and machining of nickel-based alloys.

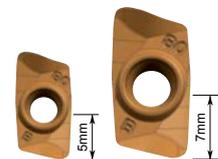

Features 2

- The cutting flute length is shortened to suppress chattering vibrations during slotting, etc.

10Type APMX=5mm

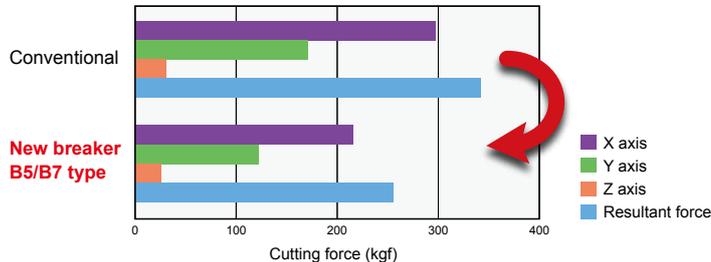

15Type APMX=7mm

For 10 type, APMX=5mm.

When using B5/C5 or B7/C7 breakers, there are restrictions on APMX. Please use after checking machining conditions beforehand.

Comparison of cutting force

Cutting force is reduced by 25% compared to conventional breakers!

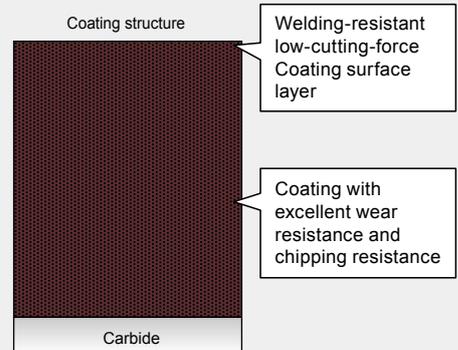

Features of AJ Coating series

- Employs an AlTiN layer with a new composition created by increasing the Al content of conventional layers.
- Excellent wear resistance, chipping resistance, and heat resistance!

New technology!!

- The new layer with high Al content employs a new composition and optimizes the structure to improve wear resistance and chipping resistance!
- Employs a low-friction-effect coating with excellent welding resistance as the top-most surface layer. This reduces welding to the work and decreases cutting force!

Layer structure AJ Coating

Technology

PVD Technology

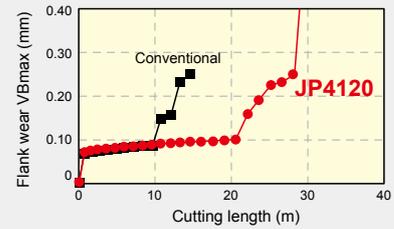

Grade for machining pre-hardened or hardened materials **JP4120**

Features

- Employs a fine carbide substrate with an excellent balance between wear resistance and toughness and the new "AJ Coating" to provide improved wear resistance and chipping resistance.
- Highly versatile with excellent wear resistance and chipping resistance when machining steel materials with hardnesses of 30 to 50 HRC.

Strong fields

- Exhibits excellent cutting performance when machining pre-hardened or hardened steel with hardnesses of 30 to 50 HRC.
- Exhibits excellent wear resistance even on difficult-to-cut diecast tool steel or precipitation-hardened stainless steels, or for finishing.

Work material : P21(40HRC)
 Tool : AHU1532R-3
 Insert : JDMT150508R
 Cutting conditions :
 $V_c=120\text{m/min}$, $f_z=0.15\text{mm/t}$
 $a_p \times a_e=3 \times 10\text{mm}$, Dry
 ※Single-flute cutting

PVD Technology

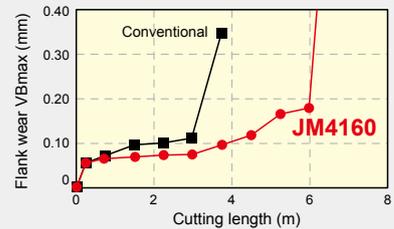

Grade for machining stainless-steel materials **JM4160**

Features

- Employs a carbide substrate with high toughness and the new "AJ Coating" to improve wear resistance and chipping resistance when machining stainless-steel materials.
- Employs AJ Coating with excellent welding resistance to reduce the welding to work material that occurs when machining stainless steel materials.

Strong fields

- Provides long tool life for general processing of stainless-steel materials

Work material : SUS630 (35HRC)
 Tool : AHU1532R-3
 Insert : JDMT150508R
 Cutting conditions :
 $V_c=120\text{m/min}$, $f_z=0.12\text{mm/t}$
 $a_p \times a_e=3 \times 5\text{mm}$, Dry
 ※Single-flute cutting

PVD Technology

General purpose for steel **JS4045**

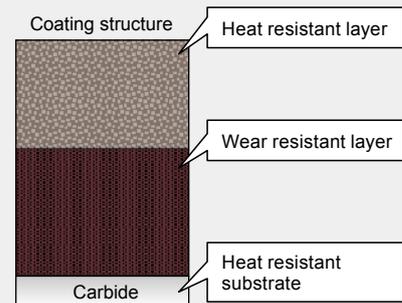

Features

- JS4045 adopts heat resistant layer, reduces the crater wear by high-speed cutting.
- JS4045 adopts heat resistant substrate, reduces the wear and improves tool life.
- Improves tool life on dry cutting.

Strong fields

- continuous and light interrupted cutting of less than 35HRC dry cutting.

Layer structure JS Coating

CVD Technology

Grade for processing stainless-steel materials **GX2160**

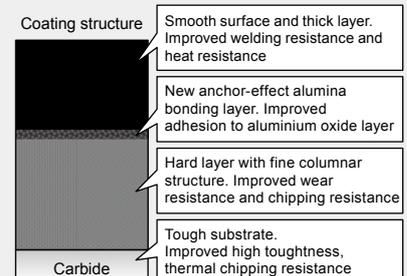

Features

- Increasing the fineness of the membrane's columnar structure improves wear resistance.

Strong fields

- Adopt CVD coating with excellent heat resistance improves wear resistance and provides long life when dry-cutting stainless steel materials.

Layer structure GX Coating

※1 For JDMT○○○○○○R-B○: JP4120, the primary recommended work material is S (titanium alloys) and the secondary recommended work material M (stainless-steel; semi-finishing).
 ※2 For JDMT○○○○○○R-C○: JP4120, the primary recommended work material is S (Ni-based alloys) and the secondary recommended work material is P (carbon steel).
 ※3 The stated recommended work materials are general criteria. In actual use, suitable recommended materials may be different depending on the cutting situation.

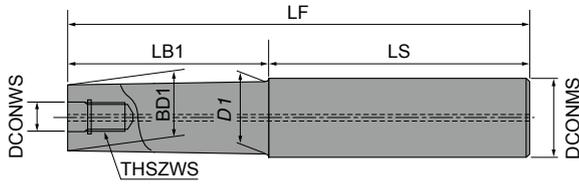

[Note] Please note that the GX Coating and JS Coating do not cause a reaction in conductive touch sensors.

[Note]

- ① When ※2 and ※1 (p. 6) are used together as a set, there is no interference.
- ② Commercial milling chucks or shrink-fit holders can be used.
- ③ For the φ40 size, it is recommended that the protrusion length be 200mm or less.
- ④ For ※3, since the cutter diameter is smaller than the shank diameter, interference occurs at the shank.

[Note] Coolant Pipe is attached.

Arbor (BT, HSK) Features

! Point

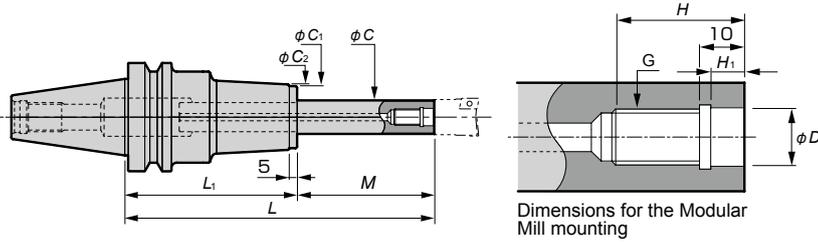

Reduce the chattering vibration by BT, HSK arbor due to the reduction in the "actual" overhang.

Figure Example : Overhang and Application Area

Line Up

Red screw arbor

Dimensions for the Modular Mill mounting

Caution

- Some of the indexable end mills cannot be attached to the RED screw arbor. Please check your indexable end mills for conformance to the dimensions, or please contact MOLDINO Tool Engineering, Ltd.
- Because cutting resistance is greater than the tool holder connection force associated with the machine spindle, please reduce the recommended cutting conditions by 50% for the RED screw arbors marked with ※. Otherwise, the tool holder shank may experience fretting corrosion or fall out of the machine spindle.

Ni based alloys (wet condition)	JP4120 JM4160	Revolution <i>n</i> / Feed speed <i>V_f</i>	800	160	640	190	510	200	400	200
		Cutting Speed <i>V_c</i> (m/min)	30 ~ 50 (40)				30 ~ 50 (40)			
		Feed Rate <i>f_z</i> (mm/t)	0.07 ~ 0.13 (0.1)				0.07 ~ 0.13 (0.1)			

[Note] Please note that the GX Coating and JS Coating do not cause a reaction in conductive touch sensors.

Adjustment of cutting conditions

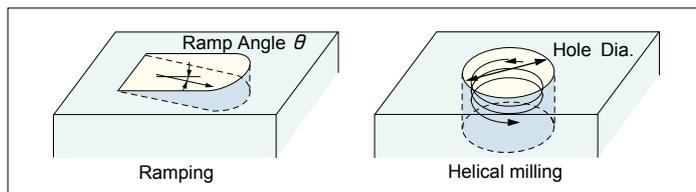

- Feed rate and spindle revolution must be adjusted to correspond to tool overhang and machining conditions.
- Please consider the standard cutting conditions as 100% and adjust the machining conditions by referring to the table below.

		Overhang		
		<3DC	3DC~5DC	5DC<
Surfacing Shoulder milling	Rotation speed <i>n</i>	100%	70%	50%
	Feed rate <i>V_f</i>	100%	70%	50%
Slotting	Rotation speed <i>n</i>	100%	70%	50%
	Feed rate <i>V_f</i>	70%	50%	35%
Ramping	Rotation speed <i>n</i>	100%	70%	50%
	Feed rate <i>V_f</i>	80%	55%	40%

Ramping

Although ramp angle is limited due to cutting edge design, direct milling is possible without pre-drill-hole with ramping and helical milling methods like next pictures.

⚠️ Attention on Safety

- ① The steel chips may cause cuts, burns or damages to eyes. Be sure to install the safety cover around the tool and wear the safety glasses when carrying out any works.
- ② Do not use non-water-soluble cutting oils. Such oils may result in fire.

① AHU(L)/AHUM 10 type (mm)

Tool dia. DC	φ16	φ20	φ21	φ25	φ26	φ30	φ32	φ35
Maximum ramp angle θ	4°	3°	3°	2.5°	2.5°	2°	2°	1.5°
Hole Dia.	21~29	29~37	31~39	39~47	41~49	49~56	53~61	59~66

② AHU(L)/AHUM 15 type (mm)

Tool dia. DC	φ25	φ30	φ32	φ35	φ40	φ50
Maximum ramp angle θ	5°	4°	4°	3.5°	3°	2°
Hole Dia.	34~47	43~56	47~60	54~66	64~76	83~96

③ AHUB15 type (mm)

Tool dia. DC	φ50	φ63	φ80	φ100
Maximum ramp angle θ	2°	1.5°	1.0°	0.5°
Hole Dia.	83~96	100~116	135~152	168~192

[Note] ① The ramp angle θ should be set within the ranges listed above. Use at ramp angles of 1° or less is recommended. ② For hole diameters outside the ranges listed above, a pilot hole should be drilled before milling.

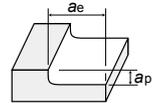

Recommended Cutting Conditions

○ Cutting conditions for cutting aluminum alloy and copper using SD5010

<Shoulder cutting> : **$a_e=0.5DC$**

Work material	Cutting conditions	AHU/AHUM 10 type					AHU/AHUB/AHUM 15 type							
		φ16 2 Flutes	φ20 3 Flutes	φ25 4 Flutes	φ32 5 Flutes	φ35 5 Flutes	φ25 2 Flutes	φ32 3 Flutes	φ35 3 Flutes	φ40 4 Flutes	φ50 5 Flutes	φ63 6 Flutes	φ80 7 Flutes	φ100 8 Flutes
Expanded aluminum alloy material A5052, A7075 etc. (Air-blow or wet: Water-soluble agent)	Revolution n (min ⁻¹)	15,900	15,900	12,700	11,900	10,910	12,000	9,950	9,090	9,500	7,640	6,060	5,970	4,770

	Feed rate f_z (mm/t)	0.15	0.15	0.15	0.15	0.15	0.2	0.2	0.2	0.2	0.2	0.2	0.2	0.2
	Axial depth of cut a_p (mm)	3	3	3	3	3	5	5	5	5	5	5	5	5
Pure copper C1100, C1020 etc. (Wet: Water-soluble agent)	Revolution n (min ⁻¹)	5,970	4,770	3,820	2,980	2,730	3,820	2,980	2,730	2,390	1,910	1,520	1,190	955
	Cutting speed v_c (m/min)	300	300	300	300	300	300	300	300	300	300	300	300	300
	Feed speed v_f (mm/min)	1,790	2,150	2,290	2,240	2,050	1,530	1,790	1,640	1,910	1,910	1,820	1,670	1,530
	Feed rate f_z (mm/t)	0.15	0.15	0.15	0.15	0.15	0.2	0.2	0.2	0.2	0.2	0.2	0.2	0.2
	Axial depth of cut a_p (mm)	3	3	3	3	3	5	5	5	5	5	5	5	5

- [Note] ① Use the appropriate coolant for the work material and machining shape.
 ② These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
 ③ When cutting grooves, reduce the feed rate by 30% (set it to 0.7 times the value shown above).
 ④ When L/D = 4 or higher, reduce the rotation speed and feed rate by 60% (set them to 0.4 times the values shown above).
 ⑤ Use on a machine equipped with splashguards. During use, be sure to wear protective equipment such as safety glasses, and always perform work in a safe environment.
 ⑥ When using a machine that cannot provide the rotation speed shown above, set the highest rotation speed possible and calculate the feed rate using the f_z value.
 ⑦ Be sure to use this tool at rotation speeds within the acceptable range for the milling chuck being used. If the acceptable rotation speed range is below the rotation speed shown above, set the highest acceptable rotation speed and calculate the feed rate using the f_z value.

○ Cutting conditions for cutting graphite and cast aluminium alloy

Work material	Recommended grade	Cutting conditions	AHU/AHUM 10 type		AHU/AHUB/AHUM 15 type		
			φ16	φ20~35	φ25~50	φ63~80	φ100
Graphite	HD7010	Cutting speed V_c (m/min)	150~300	150~300	150~300	150~300	150~300
		Feed rate f_z (mm/t)	0.10~0.20	0.10~0.20	0.1~0.25	0.1~0.25	0.1~0.25
Cast aluminum alloy AC4A, ADC12 etc (Air-blow or wet: water-soluble agent)	HD7010	Cutting speed V_c (m/min)	200~500	200~500	200~600	200~600	200~600
		Feed rate f_z (mm/t)	0.10~0.20	0.10~0.20	0.1~0.25	0.1~0.25	0.1~0.25

- [Note] ① Use the appropriate coolant for the work material and machining shape.
 ② These conditions are for general guidance; in actual machining conditions adjust the parameters according to your actual machine and work-piece conditions.
 ③ Since there is a danger of breakage when using this tool, be sure to use the cutting area cover, protective goggles, safety shoes, etc.

Overhang and Cutting Area

Attentions on Safety

1. Attentions regarding handling

- (1) When removing the tool from the case (package), be careful not to drop it on your foot or drop it onto the tips of your bare fingers.
- (2) When actually setting the inserts, be careful not to touch the cutting flute directly with your bare hands.

2. Attentions regarding mounting

- (1) When preparing for use, be sure that the inserts are firmly mounted in place and that they are firmly mounted on the arbor, etc.
- (2) If abnormal chattering occurs during use, stop the machine immediately and remove the cause of the chattering.

3. Attentions during use

- (1) Before use, confirm the dimensions and direction of rotation of the tool and milling work material.
- (2) The numerical values in the standard cutting conditions table should be used as criteria when starting new work. The cutting conditions should be adjusted as appropriate when the cutting depth is large, the rigidity of the machine being used is low, or according to the conditions of the work material.
- (3) The inserts are made of a hard material. During use, they may break and fly off. In addition, cutting chips may also fly off. Since there is a danger of injury to workers, fire, or eye damage from such flying pieces, a safety cover should be installed and safety equipment such as safety glasses should be worn to create a safe environment for work.
 - Do not use where there is a risk of fire or explosion.
 - Do not use non-water-soluble cutting oils. Such oils may result in fire.
- (4) Do not use the tool for any purpose other than that for which it is intended, and do not modify it.
